

## ■ TECHNICAL SPECIFICATION

Power Supply		90-240 VAC 50/60 Hz 24 VAC/VDC ±15%
Power Consumption		3.5 VA
Display		7-Segment, 0.4 Inch 4 Digit
Input	DC Voltage	0 - 500 VDC
	Accuracy	± 0.25 % FSR @ 25 °C
	Sampling Time	250 mSec
Output	Maximum 2 Output	
	Alarm Output	Relay Contact, 5A/250VAC
	Analog Output	4-20 mA Maximum 500 Ω 0-10 VDC Minimum 1 kΩ
	Analog Output	4-20 mA ±0.05% FSR, ± 3 ppm/ °C
	Accuracy	0-10 VDC ±0.05% FSR, ± 2 ppm/ °C
Communication	Protocol	MODBUS RTU
	Baud Rate	2400,4800,9600,19200,38400,57600
	Parity	None, Even, Odd
	Data Bit	8 bit
	Stop Bit	1, 2
	Support Device Node	128 Node.
Ambient Operation	Temperature	-10 °C to 60 °C
Ambient Storage	Humidity	<85% RH Non-Condensing
	Temperature	-20 °C to 80 °C
	Humidity	<85% RH Non-Condensing
Protection Degree		IP30
Installation		DIN RAIL
Material		ABS-VO
Size		36 x 100 x 90 mm.
Weight		225 g.

## ■ DIMENSION

Unit: mm.

## ■ DESCRIPTION

- Device convert voltage signal from direct current to Standard analog 4-20 mA, 0-10 Vdc
- Can choose Output to be Relay Alarm
- Input and Output is isolate from other (Isolation)
- Display by 7-Segment 4 Digits
- LED status Output1, Output2
- Communicated by RS-485 Modbus RTU (via Output 2)

## ■ GENERAL DESCRIPTION

IM-B(Signal Transmitter) convert from direct voltage to standard analog signal

4-20 mA, 0-10VDC, RS-485 or Relay Alarm by IM-B can choose Output maximum 2 set per 1 signal Input

IM-B have measure system to measure Input and Output signal both isolate from each other protect problem about Input/Output distribut each other. IM-B has 7-Segment 4 digits for show measure result Input sensor or analog output 4-20mA, 0-10 VDC made them convince to analyze and check Input/Output signal

IM-B can communication via Modbus RTU by choose purchase Output 2 to be RS-485 made it can use with SCADA system.

## ■ ALARM RELAY OPERATION

Alarm operation system user can choose function at variable  $R_{LF1}$  and  $R_{LF2}$ . The variable consist of

1. Most significant digit when user set it to be 1 define Alarm Relay operate as holding alarm relay is when Alarm Relay operated. It will continue operation until it turn ON/OFF again and when user set it to be 0 is normal Alarm Relay.

### 2. Second digit

When set this digit to 0 it will operate by use Hysteresis without Stand-by sequence, Alarm relay will work relate with  $R_{LH1}$ ,  $R_{LL1}$ ,  $HYS1$ ,  $R_{LH2}$ ,  $R_{LL2}$  and  $HYS2$  by Alarm by Alarm relay will work immediately that it follows condition see calculation at Picture 1

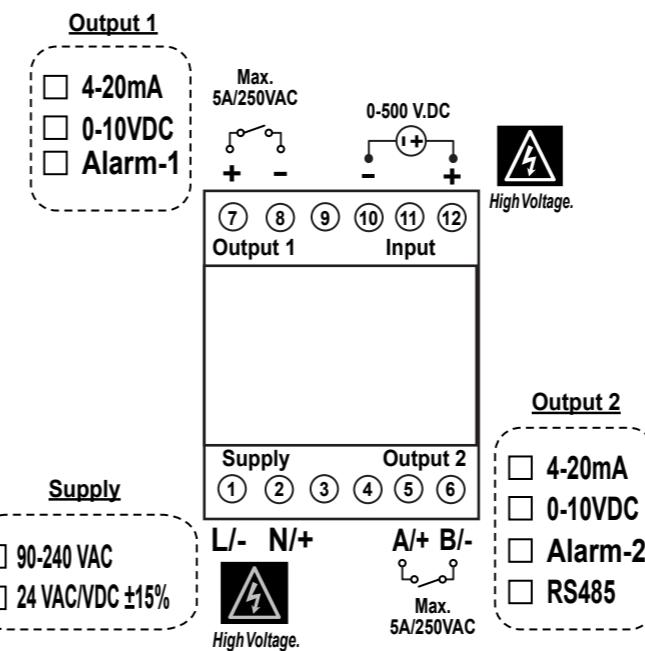

When set to it be 1 is it operate by use Hysteresis with Stand-by sequence.

It means device will operate as 0 but Alarm relay will not operate until Process value will have value in correct range see calculation in picture 1.

When set to it be 2 the operation with no Hysteresis in this mode when Process Value be range that Alarm relay operate will be delay time follow  $d_{t1}$  or  $d_{t2}$  in previously they will operate see calculation in picture 1.

3. last significant digit for choosing Alarm function when set to be 0 means Alarm relay do not operate.  
when set to be 1 means Process value high alarm.  
when set to be 2 means Process value high alarm.  
when set to be 3 means Process value low alarm.  
when set to be 4 means Process value high low range alarm.

## ■ WIRING DIAGRAM

## ■ ORDERING CODE

IM - B	OUTPUT 1	OUTPUT 2	POWER SUPPLY	SPECIAL RANGE
	G 0-10 VDC	O NONE	24 24 VDC/VDC±15%	Input Range
	I 4-20 mA	G 0-10VDC	220 90-240VAC	
	R1 Relay	I 4-20mA		
		R2 Relay		
		M RS-485		

Example: IM-B-I-G-220

Output 1 = 4-20 mA, Output 2 = 0-10VDC

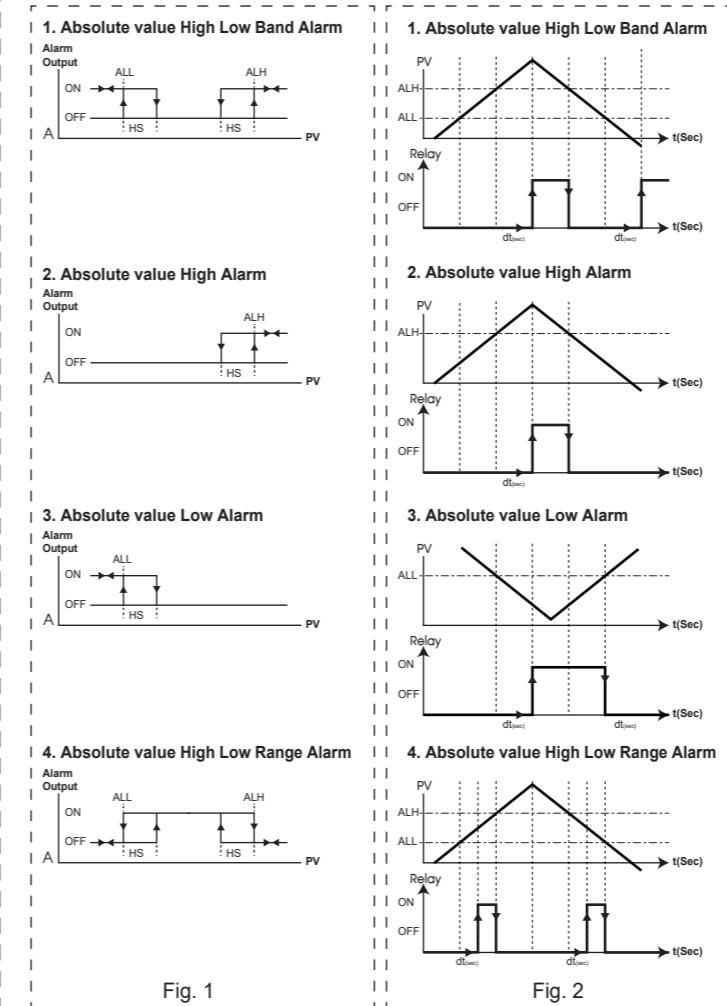

Power Supply 90-240 VAC

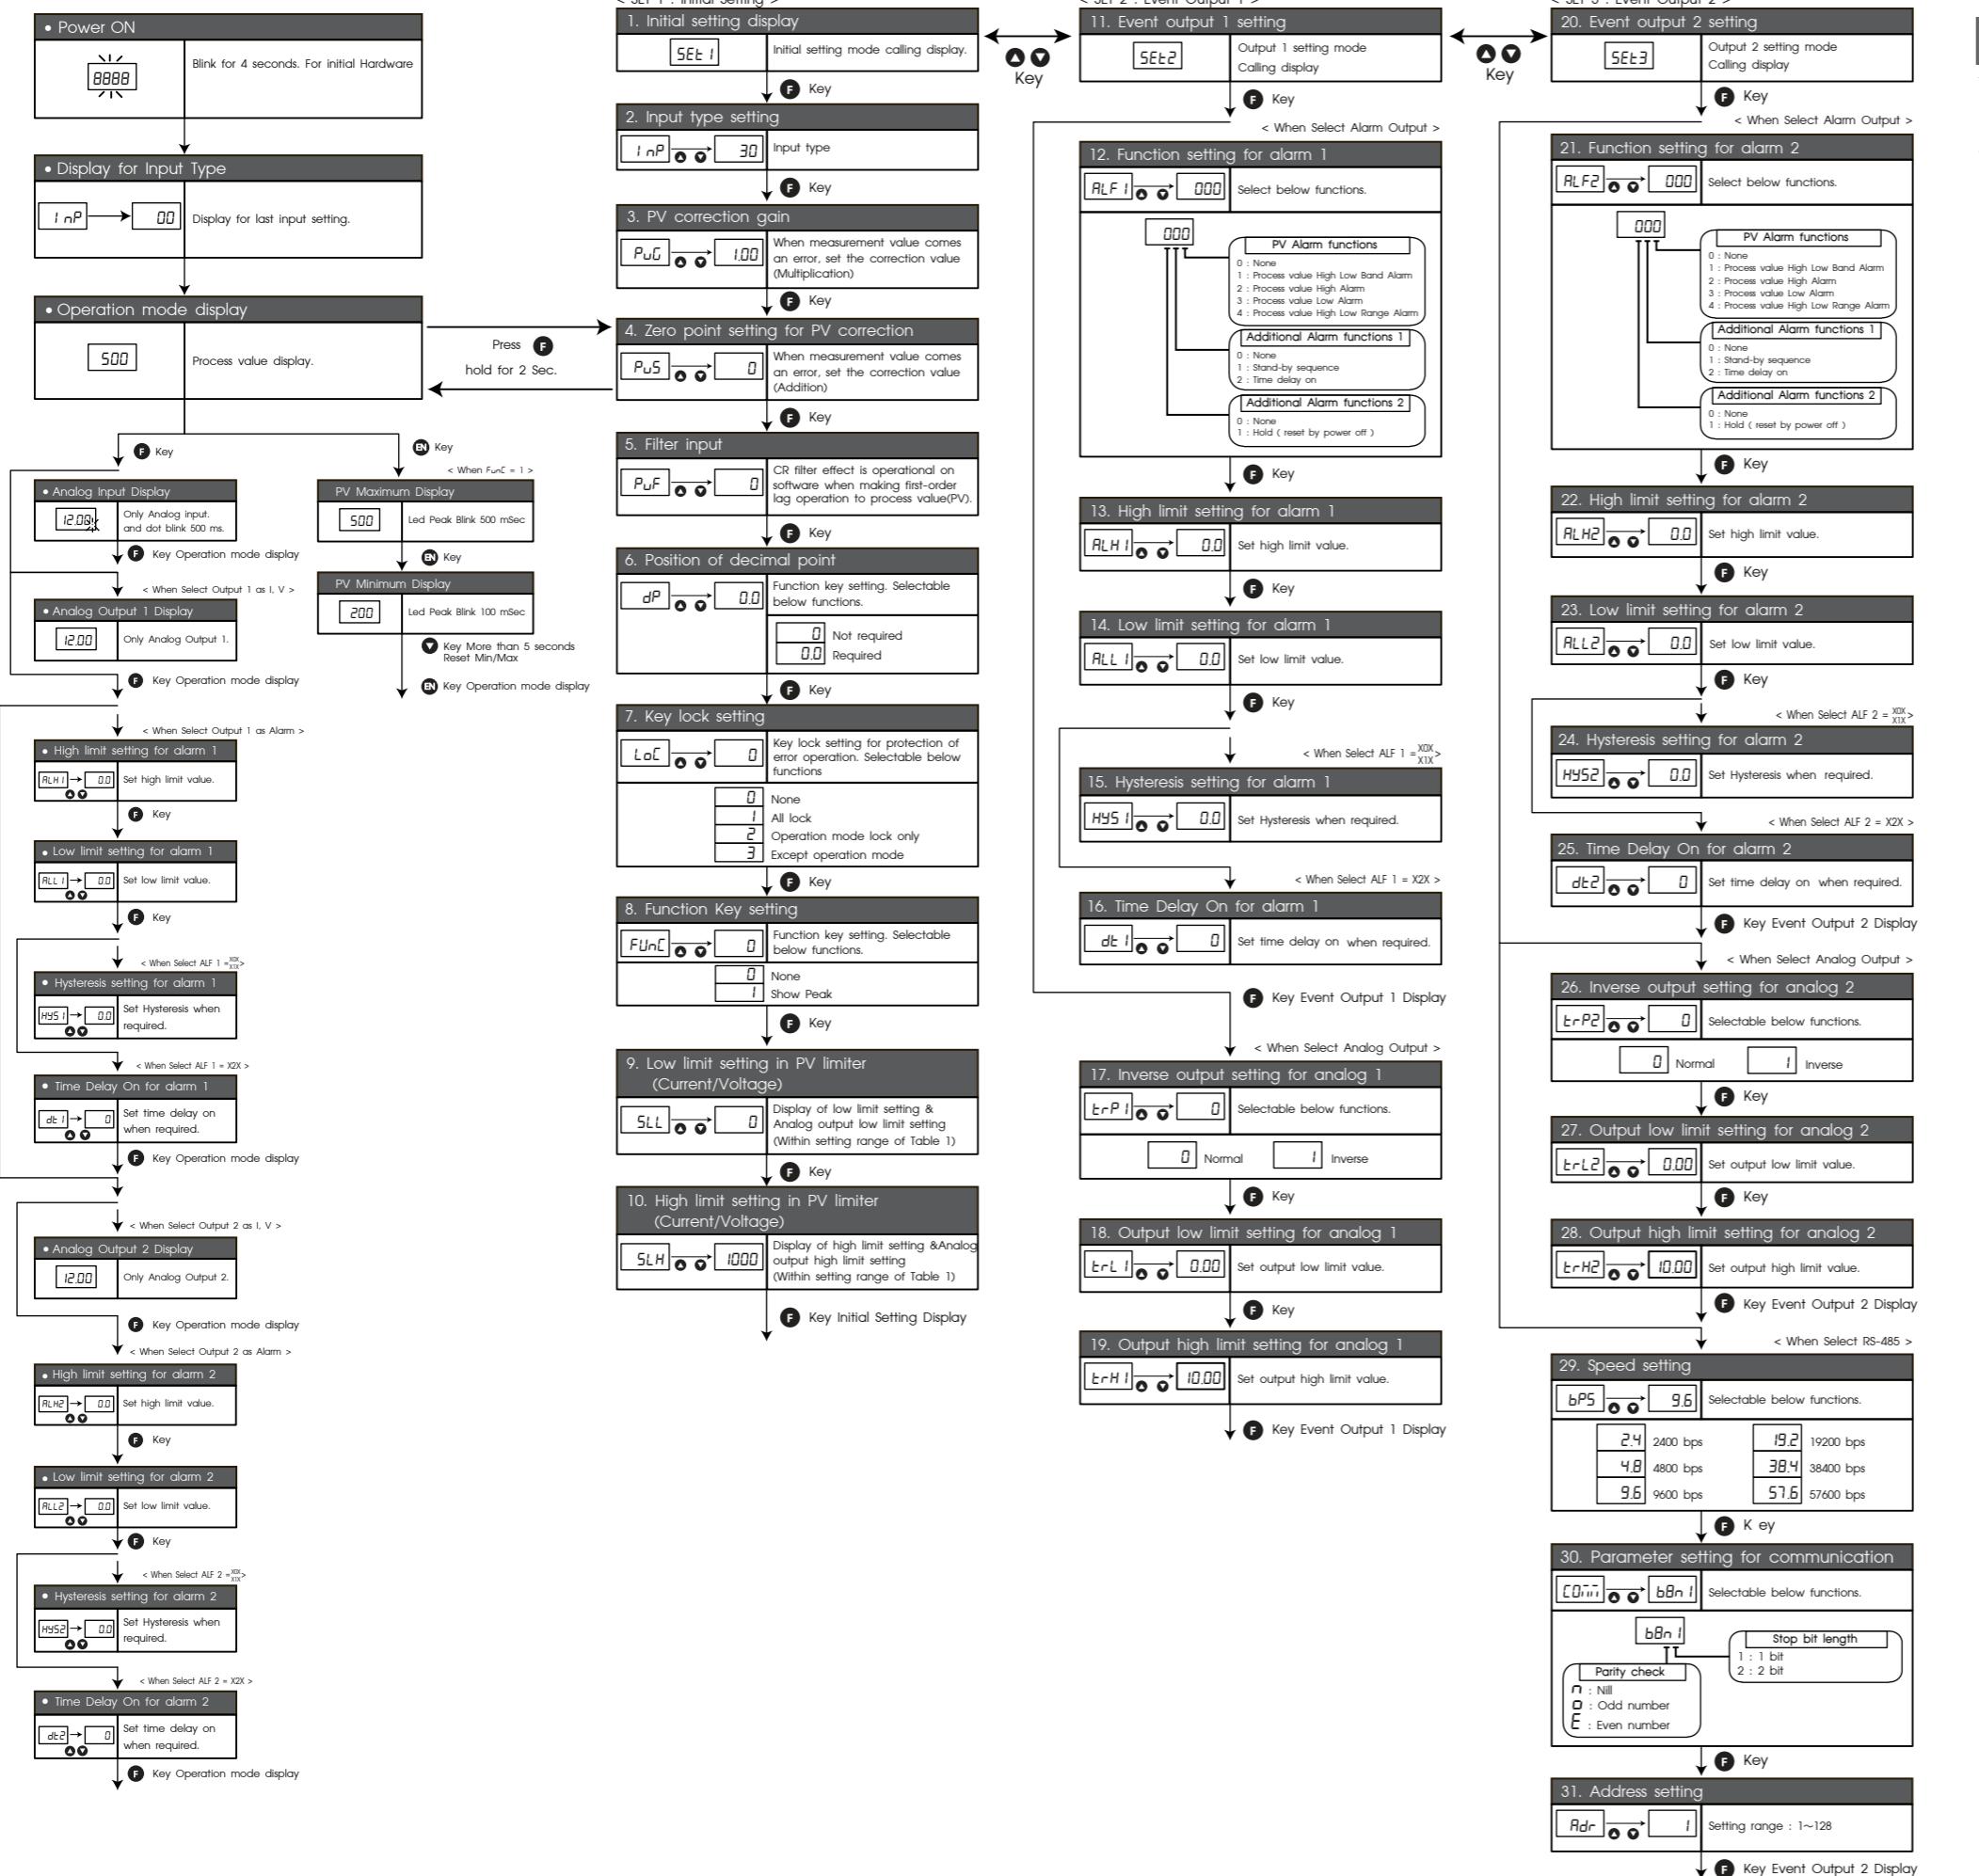

## ■ ALARM OUTPUT : Process value (PV) to be used as Alarm Output

Stand-by sequence : After starting operation of step, alarm output does not turn on unless the process value reach the value of OFF position of alarm output.

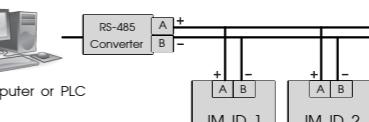

### Hysteresis Mode

1. Hysteresis by Absolute Value (Fig. 1)
2. Hysteresis by Time (Fig. 2)

**SERIAL COMMUNICATIONS**

The IM-Series are equipped with a RS-485 Series communication interface to allow connection to computer or PLCs. MODBUS protocol is provided as standard communication. The user can connect IM-Series as network up to 128 Node.

**Wiring Diagram****MODBUS PROTOCOL**

This MODBUS Protocol has been implemented in accordance with MODBUS.ORG MODBUS Application Protocol Specification V1.1 With the following conditions applying.

The following conditions apply Baudrate can be selected refer 22.Speed setting the format is MODBUS RTU UART data can be selected refer 23.Communication setting Data is considered to be half duplex using 2 wire.

**Modbus Function Code**

Function code	Operation	Broadcast
0x03	Read Holding Registers	No
0x04	Read Multiple Registers	No
0x06	Preset Single Registers	Yes
0x08	Loop Back Diagnostic	No

**Modbus Function Code**

Register Address Decimal / Hex	Contents	Format	Word	Access
0 0x0	PV	int	1	Read Only
1 0x1	Analog Output 1	int	1	Read Only
2 0x2	Analog Output 2	int	1	Read Only
3 0x3	Alarm Status	int	1	Read Only
4 0x4	Input Type	int	1	Read Only
5 0x5	PV Correction Gain	int	1	R/W
6 0x6	PV Correction offset	int	1	R/W
7 0x7	PV Filter	int	1	R/W
8 0x8	Decimal Point	int	1	R/W
9 0x9	Unit	int	1	Read Only
10 0xA	Lock Key Function	int	1	R/W
11 0xC	Analog Input Low Limit	int	1	Read Only
13 0xD	Analog Input High Limit	int	1	Read Only
14 0xE	Low Limit	int	1	R/W
15 0xF	High Limit	int	1	R/W
16 0x10	Function Alarm 1	int	1	R/W
17 0x11	Alarm 1 High	int	1	R/W
18 0x12	Alarm 1 Lo	int	1	R/W
19 0x13	Alarm 1 Sensitivity	int	1	R/W
20 0x14	Inverse output setting for analog 1	int	1	R/W
21 0x15	Output low limit setting for analog 1	int	1	R/W
22 0x16	Output high limit setting for analog 1	int	1	R/W

<sup>1</sup>Data Return 0.

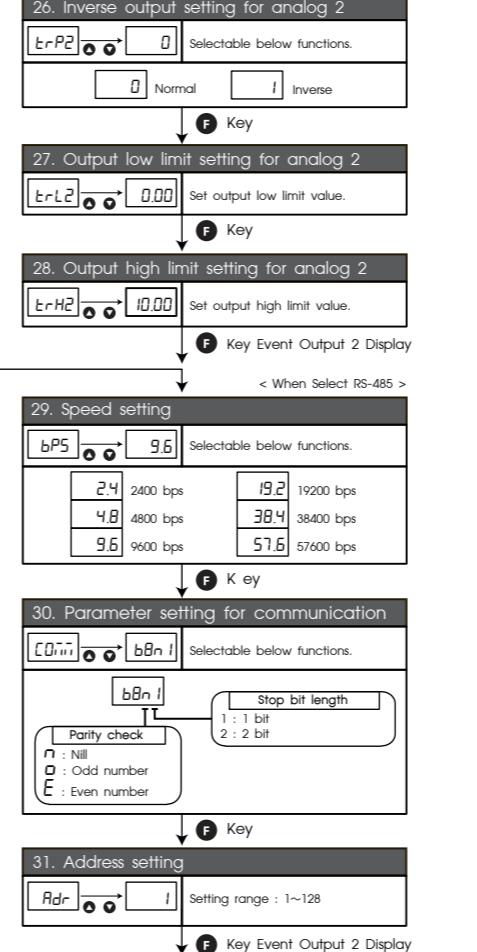

Here is an Example of a Request to Read Input Register 1:

Request	Responses
Field Name (Hex)	Field Name (Hex)
Slave Address	Slave Address 01
Function	Function 04
Starting Address Hi	Byte Count 02
Start Address Lo	Input Reg. 1 Hi 00
Quantity of Input Reg. Hi	Input Reg. 1 Lo 19
Quantity of Input Reg. Lo	CRC Hi 78
CRC Hi	CRC Lo FA
CRC Lo	0xCA

The contents of input register 1 are shown as the 2 bytes values of 00 19 hex, or 25 decimal.

Here is an Example of a Request to Write Input Register 2 to 00 08 Hex:

Request	Response
Field Name (Hex)	Field Name (Hex)
Slave Address	Slave Device ID 01
Function	Function 06
Starting Address Hi	Exception Code 02
Starting Address Lo	Register Address Hi 00
Register Address Lo	Register Address Lo 00
Register Value Hi	Register Value Lo 00
Register Value Lo	Register Value Lo 08
CRC Hi	CRC Hi D9
CRC Lo	CRC Lo CC
