- RS-485 Communication MODBUS RTU Protocol.
- Auto Tuning calculate PID automatic.
- Bar graph show % Output.
- Heater break function.
- Can choose Output to operate in Heating and Cooling mode.

OPERATION

TMP-Series is digital temperature and process controller that can receive Input signal both thermocouple, PT100, 4-20 mA and 0-10 VDC by Thermocouple and PT100 can choose type K, J, R, T, N, S, E, PT100 and 0-100 mV by pressing Keypad Switch can control Heating system is Output will be ON when value from measure lower than Setpoint or Cooling system is output will ON when value from measure more than Setpoint value. Controlling can choose ON/OFF, P, PD and PID which TMP-Series can calculate PID value by itself by pressing Auto Tuning device will leard system and set PID automatic it made system controlling has stability as require. ON/OFF control can set Hysteresis 0-100% Full Scale to define the time gap between ON and OFF.

TMP-Series can choose model that has 2 Output are Output 1 will has duty to be Heating and Output 2 will be Cooling by reference same Setpoint for more stable controlling such as Output 1 control Heater for heating and Output 2 control fan for heat ventilation except TMP-48 (48x48 mm.) no Output 2.

Heater Break is Heater break checking function by there are CT lasso at heater wire to measure current in case that no current flows through means Heater break and Alarm Heater Break will operate which made user knows heater break status.

Application Suitable with plastic machine, packaging machine, Food Machine, Oven, Electronic Machine.
